DETAILED ACTION

Receipt of Papers

Receipt is acknowledged of the Amendment B, received by the Office November 5, 2002.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9 and 11-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

These claims are rejected because it is unclear to the examiner what the claimed invention is. When claiming a combination dosage form, it is essential that the claim be specific as to the nature of the dosage form. In the instant claims it is unclear whether the form is a two layered tablet, a capsule filled with two different types of particles, a capsule filled with twice coated particles, or even two completely different tablets or capsules administered together. Based on the broadness of the instant claims, any of the formulations described above read on Applicant's claim. It is recommended that the invention be more clearly defined in the response to this Action.

Claim Rejections - 35 USC § 102

Art Unit: 1615

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 and 11-20 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 97/02020 to Dietrich *et al.*. Dietrich *et al.* disclose an oral pharmaceutical composition of pantoprazole in pellet or tablet form, wherein the drug is at least partly in slow release form, and is administered in combination with an antimicrobial active (abstract). Furthermore, Deitrich *et al.* teach that the slow release form has a core, at least one intermediate layer controlling release of the active agent and an outer enteric layer which is soluble in the small intestine. Additionalloy, Deitrich *et al.* teach that the intermediate coating can be a methacrylate polymer (Eudragits). Deitrich *et al.* also teach that traditional excipients can be included, such as cross linked polyvinyl pyrrolidone as a disintegrant (p 8, last line). This disclosure anticipates the above listed claims.
